» Stratolaunch Systems Corporation

Address:

Alabama, United States

Description:

Stratolaunch, founded in 2011 by Paul G. Allen, is developing an air-launch platform to make access to space more convenient, reliable, and routine. We believe that normalizing access to low Earth orbit (LEO) has the potential to redefine our lives by creating more opportunities for commercial, philanthropic and governmental organizations to collect rich and actionable data and drive advancements in science, research, and technology from space.
